LINKFIELDS · CONTENT, SEO AND COPYRIGHT REVIEW

Linkfields website: content, SEO and copyright review

10 November 2026. Covers the eleven requests of 9 November 2026 (partners strip, button hovers, Products menu, site-wide content, duplicates, SEO, copyright, gradients and the email band).
All changes are live on the website and stored in the CMS. Nothing in this report is legal advice; the copyright section records the published rules we applied and the confirmations still needed from Linkfields.

1. Summary

11 / 11	242	77 / 77	0	3	10
requests delivered	content corrections live	unique titles and descriptions	broken links or section targets	badges made compliant	partner logos with colour hover

All eleven requests are complete and live. The table maps each request to what changed; sections 2–7 give the detail.

#	Request	What changed
1	Partner logos	Automation Anywhere and ElectroNeek removed; HP added. Every logo shows in white and switches to its original colours on hover. The "OEM & technology partners" label is now in an orange-to-gold gradient.
2	Button hovers	All buttons change colour on hover: orange primary buttons cross-fade to royal blue, dark outline buttons fill with the orange gradient. The same treatment applies to header, menu, pop-up and scroll-to-top buttons.
3	Products menu numbers	The 01–04 numbers are gone from the Products & Accelerators menu, and the tiles are tighter now that the numbers no longer take space.
4–7	Content, flow, duplicates, quality	All 77 pages and blog posts were reviewed. **242 corrections** were applied across 73 of them, covering wording, missing links, repetition, tone and grammar. Section 3 explains the method.
8	SEO	New title and description on every page and post (77 of 77, all unique). Keyword sets were refreshed, and structured data was added for the organisation, its six offices, breadcrumbs, services and articles.
9	Copyright	Fonts, software, images, logos and badges were audited. Three badges were replaced or removed to comply with their owners' published rules (section 5).
10	Gradients	Highlighted words in every section heading now use a subtle orange-to-amber gradient, matching the buttons, email cards and scroll-to-top button.
11	Email band	The bulky blue band is now a compact dark strip: a short heading plus three glass cards with gradient icons. Each full address fits at every screen size, from mobile to 1920 px.

2. Visual and interaction changes

Partner strip (home hero). The strip now reads SAP, Microsoft, Microsoft Azure, Salesforce, Oracle, HP, Odoo, Zoho, UiPath and Blue Prism. Each logo has two versions, a white one for the dark banner and the original colour one, which appears on a white chip on hover. The new colour logos (HP, Azure, UiPath, Blue Prism) come from Wikimedia Commons, where they are recorded as trademark-only images without copyright. While testing, we found that hovering did nothing on two-thirds of the scrolling strip: the repeated copies of the logo set had been made non-interactive. Hover and click now work on every visible logo, and keyboard users still tab through each logo once only.

Buttons. A hover state that only grows the button was easy to miss, so each button now also changes colour. Primary buttons go from the orange gradient to royal blue, and secondary buttons from dark outline to the orange gradient. Focus rings and the subtle lift are unchanged.

Products menu. Without the numbers, each tile starts directly with the product family name, so the panel is shorter and easier to scan.

Email band (Contact page). It now shows the heading "Prefer email? Write to the right team." next to three compact cards (Sales, General, Careers). Each card has an icon chip in a Linkfields accent colour. The heading moves above the cards below 1360 px so addresses are never cut off.

3. Content review: method and results

Each page and blog post was reviewed against the corporate-deck positioning, the supportive tone you asked for and the site's verified facts (offices, certifications, ranking, events). A second, stricter editorial pass then accepted, modified or rejected every suggestion. Finally, every accepted change was read by hand. Changes are applied through a single, auditable corrections file in the content pipeline, so they survive future content rebuilds.

Stage	Count
Pages and posts reviewed	77
Findings raised	339 (12 high, 204 medium, 123 low severity)
Accepted by the editorial pass	275
Rejected on manual review	37
Corrections now live	**242 on 73 pages and posts**

Type of correction	Applied	Example
Stronger, more specific wording	74	"Reimagine banking, insurance and customer services..." became "Support banking and insurance with secure digital financial services, automated workflows and connected customer experiences."
Missing links between related content	38	Terms of Use now links to the Privacy Policy. The cyber readiness solution links to Security operations, and Talent Advisory & GCC links to the office locations.
Supportive, non-confrontational tone	36	"observable pain points" became "clear improvement priorities", and "Problem and fit" became "Requirements and fit" on all four product pages.
Search-friendly headings	29	"Connect assets, data and operations" became "IT integration for *energy and mining*".
Consistency (names, CTAs, phrasing)	24	"Contact our team" became "Let’s connect", and "customer problem" became "your business requirements".
Repetition between sections	17	Industry pages that repeated the same "example engagement pattern" disclaimer now each say something specific to that industry.
Grammar and spelling (British English)	14	"Handoff" became "Hand-off", and "also referred as" became "also referred to as".
Flow and claims	6	"Modernise critical applications without losing business continuity" became "...with business continuity in mind" (no guarantee implied).

What we deliberately did not change. We kept the names you specified ("Specialist talent & managed teams", the five portfolio names, product names) and the deck phrases ("One strategic partner across your transformation", "Outcomes, not offerings"). We also kept specific facts such as office lists and SAP module coverage. Rewrites that would have made copy more generic, or that would have changed a product's positioning, were rejected. No new statistics, clients or results were introduced.

False alarms checked and closed. Nine high-severity findings were artefacts of the review, such as "article ends mid-word" when the reviewer had seen a shortened extract. Each was verified against the live page. All Products page section links resolve, and "#38 in 2023" on the News page is backed by the FT's 2023 ranking, which is linked there.

Duplicate sections. The automated audit finds no section duplicated across pages; earlier rounds had already removed repeated insight cards, social banners and CTA strips. This round's 17 rewrites cleared the remaining near-duplicate passages.

4. SEO

- **Titles and descriptions.** All 77 pages and posts have a unique title (19–59 characters, ending "| Linkfields") and a unique description (131–158 characters). Each leads with the search phrase a buyer would use, for example "SAP S/4HANA Implementation & Migration", "Global Capability Centre Strategy & Setup" or "Banking, Insurance & Fintech IT Services".
- **Keywords.** Each page has a refreshed keyword set (628 distinct terms) built around five themes. Digital transformation and application modernisation; ERP and enterprise platforms (SAP S/4HANA, Dynamics 365, Odoo, Zoho, Salesforce); data, AI and AI governance; cyber security (exposure validation, AppSec, security operations); and Global Capability Centres, BOT and managed teams. Local intent ("... South Africa") is used where Linkfields actually operates.
- **Structured data.** The site now tells search engines that Linkfields is an organisation with six offices, gives breadcrumb trails on every page, describes each service and marks blog posts as articles. The site is declared British English, and pages without their own social image use their hero image when shared on LinkedIn, X or messaging apps.
- **Crawlability.** The sitemap and robots file are live, and unknown URLs return a true 404 to Google and Bing.
- **Further keyword opportunities** (content Linkfields would need to supply): a short case study per portfolio ("SAP S/4HANA migration case study South Africa"), a GCC guide or FAQ ("how to set up a Global Capability Centre in India"), and product demonstration pages ("AI governance platform demo"). Each targets searches that the site cannot yet answer with evidence.

5. Copyright and licence audit

Area	Finding	Action
Fonts	Inter and Plus Jakarta Sans, both under the SIL Open Font License 1.1, free for commercial use. They are self-hosted at build time, so no third-party font requests are made.	None needed.
Software	About 1,600 packages (website and CMS). All use permissive licences (MIT, Apache-2.0, BSD, ISC) or are unmodified libraries under weak copyleft. Strapi runs as the free Community Edition.	None needed.
Images	Original linkfields.com images are Linkfields' own. Hero, industry, event and icon artwork was generated for this project. The globe video and event flyers were supplied by you.	Confirm that any stock photos on the old site were bought under perpetual licences (standard for stock libraries).
Partner logos	Logos are used to name genuine partnerships. HP, Azure, UiPath and Blue Prism colour files are trademark-only images without copyright.	Optional: swap in each vendor's official partner-programme badge from its partner portal.
Great Place To Work	GPTW terms allow the badge only during the 12-month certification period. The badge on file reads "Certified Sep 2023 – Sep 2024, India", which has expired.	**Removed** from the footer and hero strip. The Careers page keeps a dated text mention. It can go back as soon as a current certificate is supplied.

Area	Finding	Action
FT / Statista ranking	Statista licenses the official award logo through its award portal.	The official artwork is **replaced** by our own text badge "#35 · Africa's Fastest-Growing 2026" and a logo-free news card. The factual mention and link remain. Your supplied artwork is stored, ready to restore once a logo licence is confirmed.
ISO 9001	ISO does not allow its logo to be used to show certification. The old ISO 9001 badge contained the ISO globe logo.	**Replaced** with neutral artwork matching the ISO 27001 badge. Best practice is to use the certification body's own marks for both certificates.
Other badges	D-U-N-S, NASSCOM, YES and B-BBEE marks are kept.	Keep only while the membership or subscription is active.
Map	Google Maps embed with Google's attribution shown inside the map.	None needed.

Inputs needed from Linkfields to restore the strongest proof points: a current Great Place To Work certificate, confirmation of a Statista award logo licence, and the certification body's marks for ISO 9001 and ISO/IEC 27001.

6. Quality assurance (production)

Check	Result
Lint and type check (website)	Pass
Crawl of all sitemap pages	77 of 77 return 200
Internal links and section targets	225 links to 80 destinations: 0 broken, 0 missing sections, 0 redirects
External links	36 checked: 27 open directly, 9 (FT, BusinessTech, LinkedIn sharing) block automated checks but open in a browser; 0 broken
Section landing at 1440 px and 390 px	Direct links 18/18, in-app links 18/18 and tab clicks 313/313 at each width
Menu, drawer and footer links clicked	220 of 220 land on the right page and section
ATF pop-up and countdown	Opens for new visitors with the live countdown
Keyboard order in the partner strip	Each logo reached once; 0 of 22 duplicate links focusable
Email band at 1920, 1440, 1366, 1280, 1024 and 768 px	No address cut off

7. Editing in the CMS

- **Partner logos:** *Content Manager → Page → Home → Hero slider → partners*. Each partner has `image` (white version for the banner), `colorImage` (original colours, shown on hover), `label` and an optional `href`. Leave `colorImage` empty to show the white logo only. The strip title is the hero's `partnersLabel` field.
- **Email band:** *Content Manager → Page → Contact us → Contact email banner*. Edit `heading` (wrap words in `*asterisks*` to highlight them in the gradient), `description` and the `contacts` list (title and email). Icons are chosen automatically from each contact's title.
- **Highlighted words in headings:** the same `*asterisks*` convention works in every section heading; `_underscores_` give the gold variant.
- **SEO:** each page and post has an **SEO** block (`metaTitle`, `metaDescription`, `keywords`, optional `ogImage` for social sharing). Keep titles under 60 characters and descriptions between 140 and 160.
