LINKFIELDS · WEBSITE REVIEW

Linkfields website review: what to remove, merge and rework

Date: 8 November 2026
Scope: All 77 live pages, desktop (1,440 px) and mobile (390 px), plus navigation, mega menus, mobile drawer, footer, shared sections, forms and SEO
Benchmark: The 2026 corporate deck (positioning, five portfolios, Linkfields IP, value plays, commercial models, global presence)
Method: Thirteen page groups were reviewed section by section, in parallel and read-only, then combined with automated checks for status, length, SEO, links, spelling and repeated text. Detailed group reports are listed in the appendix.

1. The short answer

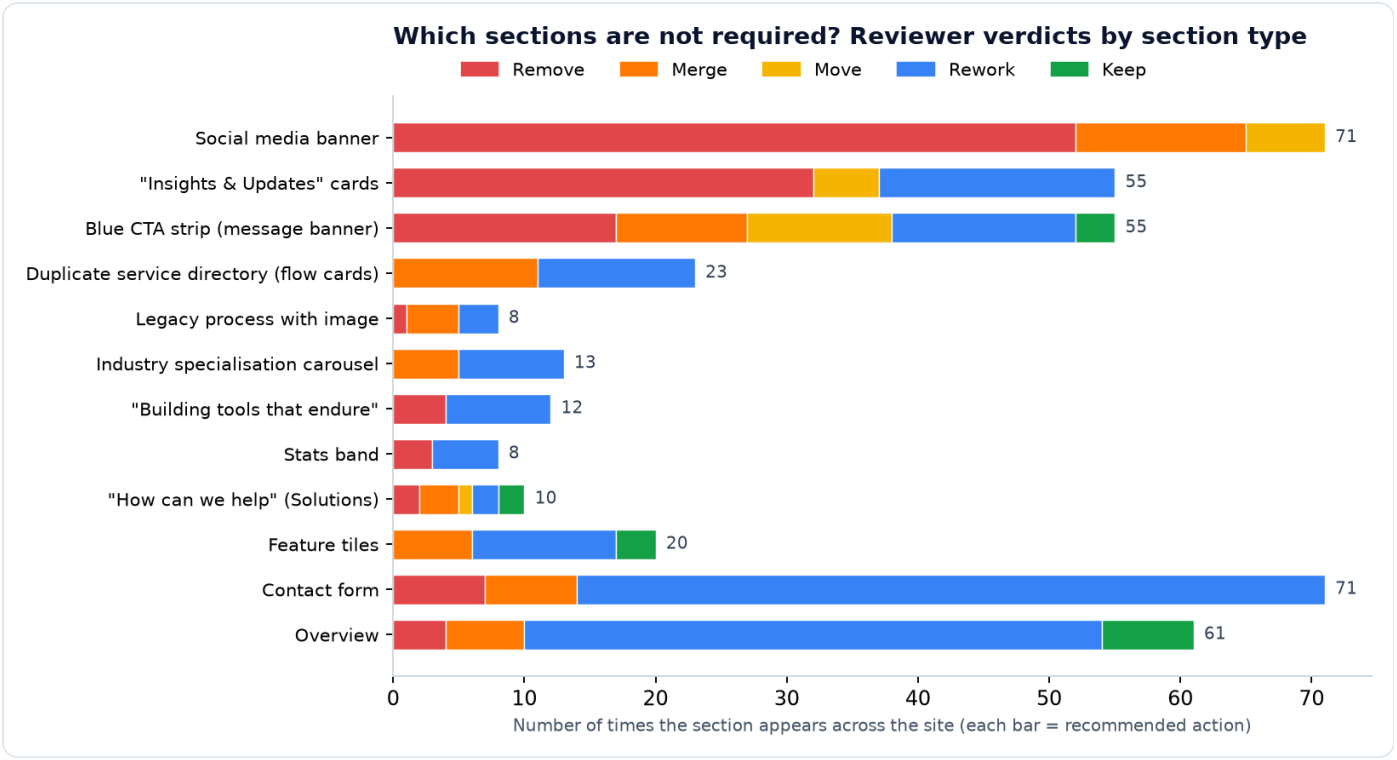

668	140	102	30	356	40
existing sections assessed	remove	merge into another section	move to a better page	rework	keep as is

You are right: a large share of the sections are not needed. Of the **668 existing sections** assessed, the review recommends **removing 140**, **merging 102** into another section, **moving 30** to a better page and **reworking 356**. Only **40 can stay exactly as they are**. Fourteen of the 77 pages should be **retired or merged** into stronger parent pages with permanent redirects, which brings the site to **63 focused pages**.

The foundations work and should stay: the visual system, the five-portfolio taxonomy, the Products & Accelerators area, the dark "Industries we know deeply" photo grid, the sticky section tabs and the full-globe hero. The problems are elsewhere:

1. **Repetition.** The same blocks are copied across many pages: the eight-industry grid, value plays, "Why Linkfields", "Who we are", the social strip, "Insights & Updates" and the blue CTA strip. Pages end up long and alike. Home is 13,695 px on desktop and 24,724 px on mobile, and some single sub-service pages run to 15–17 sections.
2. **Legacy copy from the old site** remains on about 30 sub-pages. Examples include meta descriptions saying *"We are a leading manufacturing / banking / insurance company"*, text copied from unrelated pages, American spelling (*specialization* ×49) and unsupported numbers such as *"10x faster operational growth"* and *"60% savings"*.
3. **Two competing navigation taxonomies.** The "Solutions" menu (SAP, Odoo, Microsoft Dynamics, Salesforce, iPaaS, RPA, Testorium Z) duplicates Services and leads to legacy `/solutions/...` pages.
4. **Claims without proof.** The site *says* "one strategic partner" and "software we own" but does not *show* it. There are no case studies or product screenshots, and the credentials have no sources.
5. **A few defects that lose enquiries.** The contact form accepts only South African phone numbers, which blocks buyers in the UAE, UK, USA, Australia and India. The Contact page has no H1, and the LinkedIn link opens an admin-only page.

Depth should come from proof, not more text. What will make the site stand out is fewer, sharper sections, each backed by evidence: a case, a product screen or a delivery artefact.

2. What to keep (working, and requested by you)

Keep	Refinement only
Five service portfolios and all sub-services	One service grid per pillar page instead of two or three overlapping ones
Products & Accelerators top-level menu, logos on white plates, accent tiles	Product logo in each product hero; a visible "Request a demo" route
Dark eight-industry photo grid, including Public Sector and Education	Keep in full on Home and Industries only; elsewhere show a tailored, compact version
Sticky section tabs that dock under the header and highlight the active section	Fix one broken target (testoriumz "Visit"); double-check the fast scroll back to the top
Full rotating globe in the Home hero	Fewer slides (three, or one stable message) and a pause control
Plus Jakarta Sans and Inter, brand colours, unified tile model, subtle hover scale	No change
Deck themes: who we are, value plays, client value, commercial models, why Linkfields, global presence	Show each **once**, in the right place, rather than copying it onto every page

3. Sections that are not required

These are the site-wide removals and merges. They account for most of the excess length.

Section	Where it appears	Problem	Recommendation
Social media banner ("Follow us for the latest updates")	71 pages	Full-width strip that adds nothing for a buyer; labelled TWITTER; LinkedIn points to an `/admin/` URL	**Remove** from all pages; keep icons in the footer; rename to X; use the public LinkedIn URL

Section	Where it appears	Problem	Recommendation
"Insights & Updates" cards	55 pages	The same three cards everywhere: two about the 2023 growth ranking and one 2024 finance article with expired forecasts. The fourth card links to a service page, not its article	**Remove** from service, product, accelerator and industry detail pages. Keep two curated, current articles on Home and the hubs only
Blue CTA strip (message banner)	55 pages	Often sits directly above the contact form, so the same ask appears twice	**Merge** into the contact section; keep only where it offers a specific next step (for example "Book a testoriumz demo")
Duplicate service directories (flow cards plus "What we offer")	All five pillar pages	Two or three grids list the same sub-services	**Merge** into one portfolio grid
Eight-industry grid copied onto other pages	Five pillar pages, About, Our approach	Identical descriptions, tags and images on seven pages	**Remove** from About and Our approach; on pillar pages replace with a compact "Where this portfolio applies" list of tailored use cases
"Building tools that endure" plus the "listeners and leaders" banner	Six legacy industry pages	Identical legacy text: *"freeing you from manual billing"*, *"tuned to precision"*	**Remove**
Duplicate process and benefit blocks	App modernisation (15 sections), Cloud services (17), Integration services, Quality engineering	Several stitched-together legacy mini-pages; Integration services carries Cloud's nine-step process	**Remove** the duplicates; use the nine-section template (section 8)
Industry "Our Specialization" carousel	All industry pages	Shows one item at a time and hides the rest; American spelling	**Replace** with visible workflow tiles headed "What we deliver"
Home: careers banner	Home	A recruitment message interrupts the buyer journey	**Move** to Careers and About
Home: awards carousel	Home	Mixes the 2023 ranking, Great Place to Work and YES	**Merge** into one compact trust strip under "Who we are"
Home: standalone "Enterprise platforms" grid	Home	Repeats the Intelligent Enterprise Platforms portfolio	**Merge** into the portfolio section as a row of platform logos
Home: separate "Why enterprises choose Linkfields"	Home, Services, About	Same four cards on three pages	**Merge** with the client-value metrics into one proof section
Hero vendor strip labelled "Our Partners"	Home hero	Logos link to the Azure portal and an AWS free-tier page, and partner status is not shown	**Remove** from the hero; show as "Platforms we deliver" unless partner designations are confirmed
Sibling accelerator catalogue	All five accelerator pages	Four full cards repeat the hub	**Reduce** to one or two genuinely related links
Stats bands with unsourced numbers	Four pillar pages	550+ people, 80+ clients, 20+ partners, 150+ consultants and 5+ centres, in varying order; only "20+ years" is in the deck	**Confirm** one set of figures and use it consistently, or remove

4. Pages to retire or merge: 14 pages removed, 4 moved (all with permanent redirects)

Current page	Action	New destination
`/solutions/erp-solutions`	Retire	`/services/intelligent-enterprise-platforms`
`/solutions/erp-solutions/sap`	Rework and move	New `/services/intelligent-enterprise-platforms/sap-s4hana`
`/solutions/erp-solutions/sap/core-sap-expertise`	Merge	SAP S/4HANA page (keep carve-out and template-rollout content)
`/solutions/erp-solutions/sap/sap-hana`	Merge	SAP S/4HANA page and Platform migration & AMS (the page confuses the HANA database with S/4HANA ERP)
`/solutions/erp-solutions/sap/data-services`	Merge	Platform migration & AMS (data migration and reconciliation)
`/solutions/erp-solutions/sap/sap-special-expertise`	Merge	SAP S/4HANA page (Fiori, EHS, commerce, planning)
`/solutions/erp-solutions/sap/service&more`	Retire	SAP S/4HANA page (most of it describes a marketing agency)
`/solutions/erp-solutions/odoo`, `/microsoft-dynamics`, `/salesforce`	Rework and move	`/services/intelligent-enterprise-platforms/odoo`, `/microsoft-dynamics-365`, `/salesforce`
`/explore-more/innovationAndTransformation`	Retire	`/services/digital-transformation`
`/services/talent-advisory-gcc/staff-augmentation`	Merge	`/services/talent-advisory-gcc/specialist-talent-managed-teams#staff-augmentation`
`/services/talent-advisory-gcc/managed-teams`	Merge	`/services/talent-advisory-gcc/specialist-talent-managed-teams#managed-teams`
`/industries/banking`, `/insurance`, `/fintech`	Merge	`/industries/bfsi#banking`, `#insurance`, `#fintech` (sector sections on the BFSI page)
`/industries/mining`, `/oil-gas`	Merge	`/industries/energy-mining#mining`, `#oil-gas`

The Banking, Insurance and Manufacturing meta descriptions are wrong today, so correct them immediately even before the merges.

5. Navigation: one taxonomy, one job per menu

Problem. "Solutions" lists vendors and tools (SAP, Odoo, Microsoft Dynamics, Salesforce, iPaaS, RPA) plus an unexplained external "Testorium Z" link. All of these already sit under Services, Products & Accelerators or Industries.

Recommended structure. Each menu answers one buyer question:

Menu	Buyer question	Contents
Services	"What can you do?"	Five portfolios and sub-services, plus a visible "All services" link
Solutions (repurposed)	"Which of my problems can you solve?"	The deck's five strategic value plays: **AI Code Assurance**, **Modernisation & Programme Assurance**, **Regulated Cyber Readiness**, **Intelligent Operations**, **Capability Centres with Embedded IP**
Products & Accelerators	"What do you own?"	Eight products and five accelerators (unchanged)

Menu	Buyer question	Contents
Industries	"Do you know my sector?"	Eight industries (unchanged); BFSI explained as "Banking, Insurance & Fintech"
Company	"Who are you?"	About Linkfields, Our approach, Insights (blog and news combined), Contact
Careers	—	Direct link (unchanged)
CTA button	—	"Discuss your challenge"

The alternative is to drop "Solutions" entirely and run with five menus. Repurposing it is recommended, because it puts the deck's message, *"We lead with outcomes, not offerings"*, directly into the navigation. Each value play first links to its section on `/services`, and later to its own landing page.

The footer should follow the same model. Replace the legacy "Solutions" column with Products & Accelerators. Rename "Quick links" to "Company". Show ISO and membership badges only with entity, scope and validity confirmed.

6. Must-fix list (accuracy and defects, no input needed from you)

#	Issue	Where	Fix
1	Phone validation accepts only `0xxxxxxxxx` or `+27…`, blocking international buyers	Every contact form (browser and server)	Make phone optional and accept international formats; make the message field multi-line; add a privacy line
2	Contact page has **no H1**	`/contact-us`	Add "Contact Linkfields" as H1 with a purpose-led meta description
3	Meta descriptions say *"We are a leading manufacturing / banking / insurance company..."*	Manufacturing, Banking, Insurance	Rewrite as a technology partner serving those sectors
4	LinkedIn points to `linkedin.com/company/40661516/admin/feed/posts/` (403 for the public); "TWITTER" label	Footer and social banner	Use the public company URL (to be confirmed); rename to X
5	"Visit testoriumz" tab points to an anchor that does not exist	testoriumz product page	Add the target section, or remove the tab
6	The "SAP S/4HANA" menu opens a page with H1 "SAP HANA"	SAP pages	Fixed by the SAP consolidation (section 4)
7	Cyber Security overview and SEO still mention machine learning, which now belongs to Data & AI	`/services/cyber-security`	Remove the references and link to Data & AI
8	"Vector X" instead of **VectorX**	Exposure validation & AppSec	Correct throughout
9	"Partner RPA tools" shows **Coca-Cola and CipherWave** images linked to Blue Prism and Automation Anywhere	Automation & RPA	Replace with the correct vendor logos
10	Copied or garbled legacy text: Integration services has the Cloud nine-step process; App modernisation's "rapid prototyping" describes physical CAD; Quality engineering opens with manufacturing-style copy	Digital Transformation sub-pages	Rewrite those sections
11	Unsupported claims: "10x faster operational growth" (several pages), "60% savings" (RPA, Odoo), guaranteed accuracy and ROI, zero downtime, unconditional 24/7	DT, Data & AI, Talent, ERP pages	Remove; use only the deck's qualified metrics, and only on Home and Services

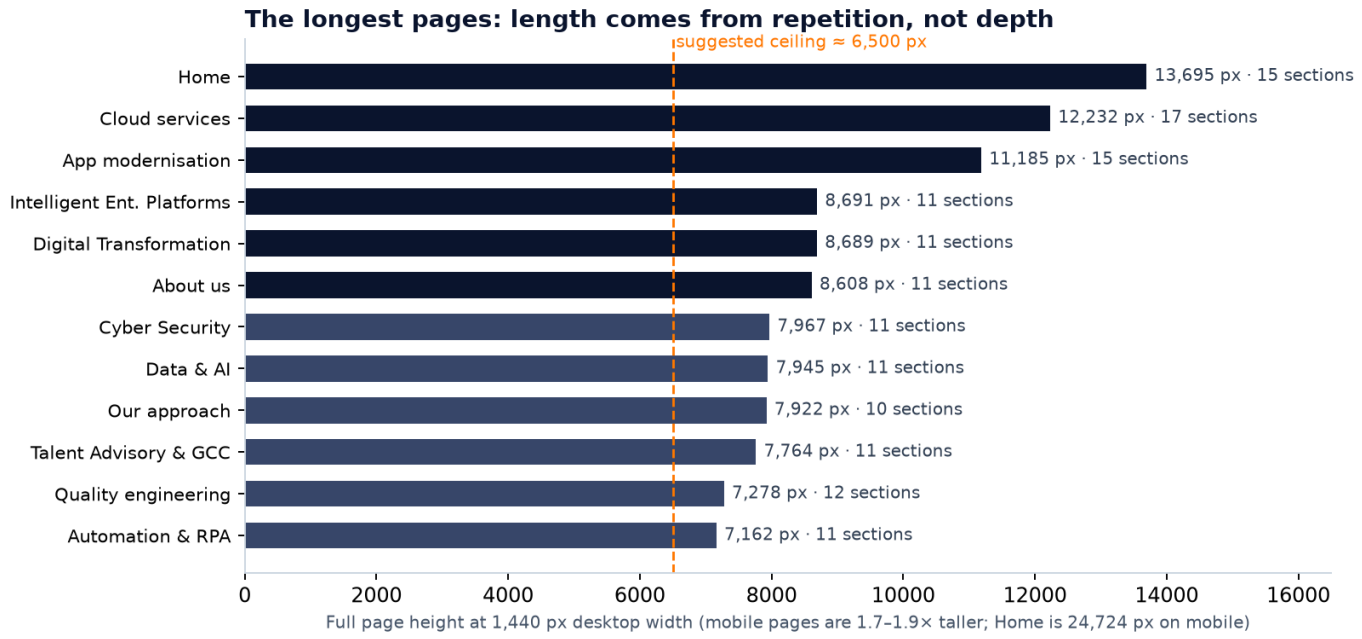

#	Issue	Where	Fix
12	American spelling: specialization ×49, organization ×11, optimize ×6, specialize ×6, analyze ×5, utilize ×4 and others	Industry and legacy ERP pages	Convert to British English; "Our Specialization" becomes "What we deliver"
13	Same text repeated across pages: industry descriptions (×10), value-play introduction (×8), legacy industry paragraphs (×6)	Site-wide	Resolved by the removals and merges in section 3
14	Unbranded white 404 page	Any unknown URL	Branded 404 with links to Services, Products, Industries and Contact
15	Five titles over 65 characters; 22 meta descriptions too short or too long	SEO	Rewrite; new home title: *"Enterprise Technology, Software & AI | Linkfields"*
16	Broken blog links containing spaces (`/company/blog/AI changing lives`, `Privacy Policy`)	Blog	Correct the slugs
17	Canonical tags use the preview host	All pages	Set the production domain when the site goes live on its final address
18	The tab bar was occasionally seen twice after a fast scroll back to the top (Banking, Insurance)	Sticky tabs	Re-test and harden the docking logic

7. Home page: current versus proposed

Home should **orient and route**, not reproduce the deck. The aim is roughly a 40% shorter desktop page and a much shorter mobile journey, without dropping any portfolio, product or industry.

Current section (15)	Action	Proposed order (12)
1. Hero slider with globe, six slides	**Rework:** keep the globe; three slides (integrated partner, governed AI and assurance, services plus owned IP) or one stable message; persistent CTA "Discuss your challenge"; pause control; remove the vendor strip	1. Hero
2. Who we are	**Rework:** compact; move mission and vision to About; add a trust strip (20+ years' leadership experience, #35 FT & Statista Africa Growth Ranking 2026, B-BBEE Level 1)	2. Who we are and trust strip
6. Value plays ("We lead with outcomes, not offerings")	**Move up:** lead with the buyer's challenge	3. Value plays
3. Five portfolios	**Rework:** one outcome line per tile, plus a platform-logo row merged in from section 8	4. Five portfolios and platforms
4. Software we own, accelerators we reuse	**Rework:** short functional descriptor per product	5. Products & Accelerators
5. Metrics plus 9. Why Linkfields	**Merge** into one proof section with qualified metrics	6. Client value / Why Linkfields
—	**Add:** two approved case studies (portfolios, IP used, outcome)	7. Integrated delivery in practice
7. Industries grid	**Keep** (required); give each card a distinct use case	8. Industries we know deeply
—	**Add:** "Buy a project, a managed service, a dedicated team or our software on its own"	9. Commercial models (compact)
10. Global presence	**Rework:** compact; South Africa HQ, India delivery centre, international presence	10. Global presence
12. Insights & Updates	**Rework:** two curated, current articles	11. Insights (optional)

Current section (15)	Action	Proposed order (12)
14. Contact form	**Rework:** "Discuss your enterprise challenge"	12. Contact
8. Enterprise platforms grid	**Merge** into section 4	—
11. Awards carousel	**Merge** into the trust strip	—
13. Careers banner	**Move** to Careers	—
15. Social banner	**Remove** (footer only)	—

8. One template per page type

Every page of the same type should follow the same lean flow. That keeps the site consistent and makes each page persuasive rather than long.

Page type	Section flow	Target
Portfolio pillar (5)	Hero and tabs → buyer outcome → one sub-service grid → relevant value plays → Linkfields IP and accelerators (logos) → how we deliver and engagement models → proof (case) → compact "where this applies" → contact	8–9 sections
Sub-service (about 25)	Hero and tabs → buyer trigger and objectives → one delivery grid → scenario or architecture → relevant IP or accelerator → secure-by-design approach → proof → buyer questions and engagement → contextual contact	9 sections
Product (8)	Problem and fit (logo in hero) → real capabilities → screens and workflow → one use case → enterprise fit (deployment, security, licensing, integrations) → demo or enquiry	6–7 sections
Accelerator (5)	What it accelerates → what is pre-built versus bespoke → artefacts → time-to-value and readiness → one or two related items → enquiry	6 sections
Industry (8)	Hero → sector context and sector routes (for example #banking) → portfolio map → visible workflow tiles → selected Linkfields products and accelerators → evidence → contact	7 sections
Company	About: identity, leadership team, history, credentials with sources, global presence. Our approach: delivery method, gates, artefacts, governance, commercial models	—

Product and accelerator links to show on industry pages (subject to your confirmation):

Industry	Products and accelerators to surface
Telecom	Linkworks, testoriumz, VectorX, Predictive Analytics (churn)
BFSI	textIQ, FinSight, VajraX, Intelligent Workflow Automation (underwriting), Predictive Analytics (fraud)
Healthcare & Pharma	Linkworks, textIQ, Intelligent Workflow Automation
Retail, FMCG & CPG	Linkworks, Predictive Analytics (forecasting), Digital Twin Suite
Manufacturing	Linkworks, Digital Twin Suite, Predictive Analytics
Energy & Mining	Linkworks, Digital Twin Suite, Predictive Analytics, Delivery accelerators (migration)
Public Sector	Linkworks, textIQ, AI Governance, Intelligent Workflow Automation
Education	EduPilot

9. Verdict by page group

Group	Pages	Verdict	Main actions
Home	1	Rework	New order (section 7); remove careers and social; merge awards, platforms and why
Company, contact, blog, news, legal	10	Rework; retire 1	About owns identity and evidence; Our approach owns delivery; fix contact form and H1; combine blog and news into Insights; archive stale 2023 items; legal pages need counsel review; retire the innovation page
Services hub and five pillars	6	Rework	One grid per pillar; tailored industries; remove corporate tail; one consistent set of stats; Cyber without ML
Digital Transformation sub-services	6	Rework	Nine-section template; remove 60%, 10x and the copied process; correct RPA logos; feature Linkworks and testoriumz
Intelligent Enterprise Platforms and legacy Solutions	12	Retire or merge 7; move 4	SAP consolidation; Odoo, Dynamics 365 and Salesforce under IEP; Zoho specifics; real AMS operating model
Data & AI sub-services	4	Rework	Remove 10x and guaranteed accuracy; rewrite Data platforms & analytics; separate AI strategy, AI security and the AI Governance product
Cyber Security sub-services	4	Rework	VectorX naming; link VajraX, VectorX and AI Governance; define the security-operations model; separate incident support from sales enquiries
Talent Advisory & GCC	6	Merge 2	Staff augmentation and Managed teams become anchored sections; remove 10x; source the GCC figures
Products	9	Rework	Real screens and demo route; deployment and licensing facts; clarify AI Governance (Linkfields layer versus Portkey and Opik)
Accelerators	5	Rework	Pre-built versus bespoke; artefacts; separate enquiry route from product licensing
Industries (hub and eight)	9	Rework	Visible workflow tiles instead of carousel; product links; fix Manufacturing and Telecom legacy copy
Legacy sub-industries	5	Merge all 5	Into BFSI and Energy & Mining sector sections
Global navigation, footer, shared	—	Rework	Repurpose Solutions; footer columns; badges with sources; branded 404

10. What we need from Linkfields

These items cannot be invented. They are what will make the site credible and distinctive.

1. **Two to five case studies** (named or anonymised): challenge, portfolios used, Linkfields IP or accelerator used, outcome, period and publication permission. This is the single biggest lift.
2. **Product screenshots or short demo clips** for each of the eight products, plus deployment and licensing facts (SaaS, licence, on-premises). Clarify **AI Governance**: what is Linkfields-owned and what are third-party tools (Portkey, Opik).
3. **Evidence for credentials:** the source for "#35 FT & Statista Africa Growth Ranking 2026", the current B-BBEE Level 1 certificate, ISO certificate scope and validity, and current NASSCOM, Great Place to Work and YES status.
4. **One confirmed set of company facts:** legal entity name ("(Pvt) Ltd" or "(Pty) Ltd"), the founding year (2008) versus "20+ years of leadership experience", people, client and partner counts, and the office list (Botswana appears on Contact; the UK is in the deck). Also confirm the phone numbers, which conflict.
5. **Partner designations** (SAP, Microsoft, Salesforce, Odoo, Zoho, AWS, Azure), if you want "Partner" rather than "Platforms we deliver".
6. **Leadership team:** names, roles, short biographies and photos for About.
7. **Public LinkedIn URL**, an enquiry response commitment (the "within 24 hours" promise needs confirming), the sales mailbox, and current vacancies or a jobs link.
8. **Legal review** of the Privacy, Cookies and Terms pages. They are currently generic templates.
9. **Insights:** three to five current articles from your specialists (or approval for us to draft them), one per value play.

11. Recommended plan

Phase	What	Needs your input?
1. Clean-up and fixes	The whole must-fix list (section 6); remove the social banners, repeated insights and duplicate CTA strips; remove the "Building tools" block and duplicate legacy blocks; British English sweep; branded 404; SEO titles and descriptions	No, can start immediately
2. Restructure	Retire or merge the 14 pages with redirects; SAP consolidation; Odoo, Dynamics and Salesforce moved under IEP; Staff augmentation and Managed teams merged; sub-industries merged into BFSI and Energy & Mining; new Home order; repurposed Solutions menu and footer; page templates applied (one grid per pillar, visible industry workflow tiles, product links on industry pages, trimmed accelerator pages)	Only a decision on the Solutions menu
3. Depth and proof	Case studies, product screens and demos, leadership team, sourced credentials, current insights, confirmed company facts, legal pages	Yes, items in section 10

Phases 1 and 2 remove, merge or relocate about 270 sections and retire 14 pages. We estimate they shorten the longest pages by roughly 30–45%. They need no new facts from you. Phase 3 then adds the evidence that makes the site stand out.

Appendix: detailed reports

Each report gives a section-by-section table for every page in its group, covering action, priority, issue and recommendation:

`00-automated-checks.md` · `01-home.md` · `02-company.md` · `03-services-pillars.md` · `04-dt-subservices.md` · `05-iep-and-solutions.md` · `06-dai-subservices.md` · `07-cyber-subservices.md` · `08-talent-subservices.md` · `09-products.md` · `10-accelerators.md` · `11-industries-main.md` · `12-industries-sub.md` · `13-global.md`, with the full structured data in `reviews.json`.
